Claims:

1. A kit for adding a monitor to a display system configured to support multiple monitors, the display system having at least one support member, and at least one electrical port, the kit comprising:
 - 5 a mounting bracket adapted to secure the monitor to the at least one support member; and
 - an electrical connector adapted to electrically connect the monitor to the at least one electrical port.
- 10 2. The kit of claim 1, wherein each support member has at least one electrical port associated therewith.
3. The kit of claim 2, wherein the mounting bracket comprises a generally wedge-shaped mating member adapted to engage a correspondingly shaped
15 socket on the at least one support member.
4. The kit of claim 2, wherein the mounting bracket has a generally wedge-shaped socket and the support member has a correspondingly shaped mating member for inserting into the socket.
20
5. The kit of claim 2, wherein the at least one electrical port transmits at least one of power and video signal to a corresponding monitor.

- 35 -

6. The kit of claim 5, wherein the at least one electrical port comprises a single electrical port for transmitting both power and video signal to a corresponding monitor, and the electrical connector cable is adapted at a first end to transmittingly engage the single electrical port, and adapted at a
5 second end to transmittingly engage both a video signal port and a power supply port on the corresponding monitor.

7. The kit of claim 5, wherein the at least one electrical port comprises a first electrical port for transmitting power to a monitor and a second electrical
10 port for transmitting video signal to a monitor, and the electrical connector cable is adapted at a first end to transmittingly engage a single electrical port on the monitor, the single electrical port for receiving both power and video signal, and adapted at a second end to transmittingly engage both the first and second electrical ports associated with the at least one support member.

15

8. The kit of claim 2, further comprising a rear facing having affixed thereto the mounting bracket.

9. The kit of claim 2, wherein the display system is configured to support
20 two monitors.

10. The kit of claim 2, wherein the mounting bracket is secured to the monitor by fasteners.

25 11. The kit of claim 1, wherein the mounting bracket is secured to the monitor by adhesive.

- 36 -

12. A method of retrofitting a monitor for a display system configured to support multiple monitors, the display system having at least one support member, the method comprising:

5 securing a mounting bracket to the monitor; and

 mounting the monitor on the display system by securing the mounting bracket to the at least one support member.

13. The method of claim 12, wherein the monitor is an off-the-shelf single
10 display monitor.

14. The method of claim 12, further comprising the step of removing an engagement means connected to the monitor before securing the mounting bracket thereto.

15

15. The method of claim 14, wherein the engagement means is unsuitable for supporting the monitor on the one support member.

16. The method of claim 15, wherein the engagement means is secured to
20 a first rear facing and the mounting bracket is secured to a second rear facing, the step of removing the engagement means including removing the first rear facing, and the step of securing a mounting bracket including securing the second rear facing to the monitor.

- 37 -

17. The method of claim 16, wherein the step of removing the first rear facing includes unscrewing.

18. The method of claim 16, wherein the step of securing the second rear facing includes screwing.

19. The method of claim 12, wherein the step of securing the mounting bracket includes securing the mounting bracket with at least one of screws and adhesive.

10

20. The method of claim 12, wherein the mounting bracket has a generally wedge-shaped mating member and the one support member has a correspondingly shaped socket for receiving the mating member.
